

CURRICULUM VITAE OF ROBERT NOEL PRINCE

8 November 2025

Home Address: 3 Morgenrood Road, Kenilworth, Cape Town, 7708
Telephone Numbers: 27 21 761 1735 (h) 27 11 559 2911 (w) 082 452 2557 (cell)
E-Mail: Robert.Prince@uct.ac.za / rprince@uj.ac.za

ACADEMIC HISTORY

2022 PhD Engineering Management, University of Johannesburg
1988 M.Sc. Mathematics, University of Cape Town (awarded with distinction)
1986 B.Sc. (Hons) Mathematics, University of the Western Cape
1983 B.Sc. Mathematics (major), Applied Mathematics (major), Mathematical Statistics,
Computer Science, Physics, University of the Western Cape
1973 Matriculated from Windermere High School, Kensington

CURRENTLY

THE UNIVERSITY OF JOHANNESBURG 2023 – Senior Research Associate, Dean's Office (FEBE)

PREVIOUS EMPLOYMENT

THE UNIVERSITY OF CAPE TOWN 2021 – 2022 Senior Scholar, Centre for Educational Assessments (CEA)

THE UNIVERSITY OF CAPE TOWN 2015 – 2020 Test Development Coordinator of the Centre for Educational Assessments (CEA)

I was responsible for all the test-related products and processes of CEA. My specific responsibilities included:

Academic functions:

- Ensuring the academic integrity -- reliability and validity -- of CEA's tests.
- On-going test development in response to institutional and national needs.
- Remaining up to date in respect of research and new developments in the area of educational assessment in general, and admissions-related testing in particular.
- Contributing to CEA's research and development through peer-reviewed publications, reports and a range of other appropriate outputs.
- Where possible, teaching and supervision of postgraduates in relation to assessment-related areas of scholarship.

Leadership & Management functions:

- Providing leadership for the test development teams with respect to item and test development and analysis.
- Line management responsibility of Academic Literacy, Quantitative Literacy, Mathematics research test leads, Statistician and Test administrator.
- Overseeing and managing the standards-setting requirements of CEA's tests.
- Analysing and reporting on test-related data to a variety of constituencies, institutionally and nationally.
- Providing training in the field of test development in order to build capacity in this scarce skill area.
- Contributing to responses to stakeholder queries (e.g. media, HEI's) relevant to CEA's tests, including interpretations of results and the implications of these.

2011 – 2014 *UNIVERSITY OF CAPE TOWN*, Deputy Director of the Academic Development Programme (ADP) seconded as Director of the Alternative Admissions Research Project (AARP), Centre for Higher Education Development (CHED)

2008 – 2010 *UNIVERSITY OF CAPE TOWN*, Deputy Director of the Academic Development Programme (ADP), Centre for Higher Education Development (CHED)

1999 – 2007 *UNIVERSITY OF CAPE TOWN*, Numeracy Centre Co-ordinator in the Academic Development Programme, Centre for Higher Education Development (CHED)

1990 – 1998 *THE UNIVERSITY OF THE WESTERN CAPE*, Department of Mathematics and Applied Mathematics

1986 – 1989 *UNIVERSITY OF CAPE TOWN*, Department of Mathematics and Applied Mathematics

1976 – 1986 *BONWIT (PTY) LTD*, Work Study Trainee (1976); Work Study Engineer (1977 – 1978); Project Engineer (1979 – 1982) and Work Study Manager (1983 – April 1986) in the Management Services Division

AWARDS AND SCHOLARSHIPS

2018	UCDP Grant
2019	URC Block Grant
2018	URC Block Grant
2017	URC Block Grant
2016	URC Block Grant
2015	ERP Grant
2011	Nelson Mandela Fellow at W.E.B. Du Bois Institute, Harvard University
1994	University of Missouri – University of the Western Cape Staff Exchange
1993	Mellon Faculty Fellowship
1983	Liebenberg and Stander
1983	Old Mutual Medal of Merit

CONTRIBUTION TO NATIONAL TEACHING AND LEARNING ENVIRONMENT

My contribution to the development of the Quantitative Literacy Tests (QLT) spans more than twenty years. These tests at the University of Cape Town determine the levels of quantitative literacy of individuals and cohorts and have been used to assess students across faculties in order to facilitate the quantitative literacy articulation gap between student cohorts and disciplinary demands. They are also used in the development of QL interventions for many faculties at UCT. I have also led the quantitative literacy test which is part of the National Benchmarks Tests (NBT) Project and have been responsible for developing the framework, trial tests and pilot tests. I have also coordinated the CEA Research and Development department which has the responsibility for the NBT Project for the national higher education sector on behalf of USAf.

- Board member of the Independent Examinations Board (IEB)
- Previous member of The Association for Mathematics Education of South Africa (AMESA)
- Previous member of the Higher Education Learning and Teaching Association of Southern Africa (HELTASA)
- Previous executive member of the Higher Education Learning and Teaching Association of Southern Africa (HELTASA)
- Previous convenor of the Access and Admission Special Interest Group (SIG) of the Higher Education Learning and Teaching Association of Southern Africa (HELTASA)
- Previous member of the South African Association for Institutional Research (SAAIR)
- Previous member of the Southern African Association for Research in Mathematics, Science and Technology Education (SAARMSTE)
- External examiner and reviewer of books, conference papers and journal articles
- Contributing and commenting on National and Institutional policy documents regarding Mathematics and Mathematical Literacy.
- I have authored and presented numerous technical reports to a range of higher education stakeholders including Universities South Africa (USAf), Department of Basic Education, Department of Higher Education and Training, Public and Private Higher Education institutions and Bursary funders.

RESEARCH

RESEARCH INTERESTS

- Access to academic practices in higher education at undergraduate and postgraduate levels - ways of mediating the articulation gaps between the practices of students and the specific academic practices in higher education.
- Educational testing in general and in particular the assessment of the Academic Literacy, Quantitative Literacy, Statistical Literacy, Mathematics and Scientific Reasoning levels of cohorts of students to assist with diagnosis of student learning difficulties, selection and placement of students into programmes, informing curriculum design and the provision of appropriate curricular interventions.
- Teacher and tutor training practices in relation to academic literacies (including academic, quantitative, mathematical, scientific and statistical literacy): ways of mediating the multiple practices that teachers of academic literacies have to draw on to teach academic literacies.
- The use of technology both as technical (psychometric and statistical) tools and as educational (blended learning) tools.
- Commutative Algebra: Analogues of Number-Theory for Higher Dimensional Rings.

RESEARCH PROJECTS

The Diagnostic Mathematics Information for Student Retention and Success (DMISRS) project.

This project is funded through the University Collaborative Development Programme (UCDP) from the Department of Higher Education and Training (DHET). The project seeks to bring mathematicians from across the country together to work collectively and collaboratively in an attempt to improve the graduation and throughput of students in Science, Technology, Engineering and Mathematics (STEM) programmes by focusing on improving student performance in mathematics.

The Academic Development research Project (ADrP) - A new generation of university students: an investigation of changes and continuities.

This project was a longitudinal quantitative and qualitative study located in the Academic Development Programme (ADP). The project focused on access and throughput of students from disadvantaged backgrounds, particularly those who have been admitted into dedicated Academic Development Programmes. A key challenge for the South African Higher Education sector is the retention and graduation of these students. Our question is: 'What facilitates or hinders the 2008 NSC students' access to and/or success in higher education study'? Research has shown that students from marginalised/disadvantaged communities, struggle to access new disciplinary discourses because of their knowledge base, linguistic difficulties and because they come from different cultural backgrounds. Rochelle Kapp and I conceptualised the project, fund-raised for it and co-convened the running of the project which had ten ADP staff members.

The National Benchmark Tests (NBT) project

In 2005, arising from concerns about the low graduation rates at South African universities, Higher Education South Africa (HESA) initiated a project designed to deliver accurate information about the academic preparedness of its incoming students. The project became known as the National Benchmark Tests Project (NBTP). Following wide consultation and sector participation in all processes, the NBTP became fully operational in 2009. It tests students' proficiencies in three core areas believed to underlie future academic success: academic literacy, quantitative literacy, and mathematics. I have been responsible for developing the framework for the quantitative literacy test which is part of this project and lead the development thereof. The NBT project is situated in the Centre for Educational Assessments (CEA). I coordinate the research and development within CEA and provide academic leadership to CEA.

The Postgraduate Literacies (PG Lit) project

The Postgraduate (PG) Literacies research project was a cross-cutting research initiative in the Centre for Higher Education Development (CHED) at the University of Cape Town. The project aimed to research and develop ways of supporting postgraduates in their writing of research. In its cross-cutting nature, it recognized that postgraduate literacies are multiple and includes academic literacy, academic numeracy practices and technology. This project involved sub-projects and I took the lead on the academic numeracy practices aspects of this project.

South African Multimodality in Education (SAME): Academic Numeracy Practices (ANP) project

Research on students' academic literacies practices has tended to focus on the written mode in order to understand the academic conventions necessary to access Higher Education. However, quantitative information

can be represented through a range of modes (such as writing, visuals and numbers) and different genres (such as tables, charts, graphs). It is important to think of the relationships between these different representations of the same data. This research looks at student texts in quantitative disciplines, in order to explore some questions around multimodal academic numeracy practices.

The Collaborative Mathematics Project (CMP)

In February 2014 the Centre for Educational Assessments (CEA) at the University of Cape Town facilitated a one-day First Year Mathematics Forum (FYMF). Academics involved in Mathematics teaching and learning across the country met to discuss the key role the NBTs could play in helping Mathematics departments to improve the learning and teaching and success of Mathematics students.

At the end of this forum five institutions agreed to work together to address some of the issues that had been raised. The Collaborative Mathematics Project was thus established, utilising funding made available by the Department of Higher Education and Training (DHET) for a three year period, with Stellenbosch University as the grant holder. The five institutions were Stellenbosch University, and the Universities of Cape Town, Fort Hare, the Free State, and KwaZulu-Natal. Representatives from these five institutions worked towards

- identifying high failure rates within first year Mathematics courses (at the five participating institutions, and others wherever possible);
- identifying the extent to which the high failure and high drop-out rates could be related to diagnostic information provided by the NSC and NBT;
- investigating (by means of a survey and focus groups) current Mathematics curriculum integrated support that is currently available
- evaluating available Mathematics support resources which students can use to address identified knowledge gaps.

One of the intended NBT outcomes was the diagnostic information on preparedness for university (beyond test scores and benchmark proficiency levels) that could be provided to institutions for their first-year cohort. This information could inform the nature of extended degree courses and Mathematics curriculum integrated support at first year level. By the end of 2016 there were, for the first time, a baseline picture of the Mathematics support situation in the five collaborating institutions.

RESEARCH OUTPUT

I have published thirty-eight peer reviewed articles (twenty-six as journal articles and twelve as peer reviewed conference proceedings), four book chapters, two book sections and one newspaper article. I have four journal articles under review. I have presented 60 papers at local, workshops and conferences and have produced approximately 40 technical reports.

PUBLICATIONS OF A SCHOLARLY NATURE

Mathematical Literacy was introduced as a subject in South African Schools and Further Education and Training Colleges in 2006. Students have a choice between Mathematics and Mathematical Literacy as a subject in their final three years of either the National Senior Certificate or the National Senior Certificate (Vocational). I have co-authored six Mathematical Literacy student books, three for use in grades 10 to 12 of the National Senior Certificate and three for use at levels two to four of the National Senior Certificate (Vocational). I have also co-authored six Mathematical Literacy teacher and lecturer guides to accompany these student books.
