

CURRICULUM VITAE OF ROBERT NOEL PRINCE

31 March 2026

Home Address: 3 Morgenrood Road, Kenilworth, Cape Town, 7708
Telephone Numbers: 27 21 761 1735 (h) 27 11 559 2911 (w) 082 452 2557 (cell)
E-Mail: Robert.Prince@uct.ac.za / rprince@uj.ac.za
Website: <https://robertprince.github.io/>
ORCID ID: <https://orcid.org/0000-0002-8640-799X>

ACADEMIC HISTORY

2022 PhD Engineering Management, University of Johannesburg
1988 M.Sc. Mathematics, University of Cape Town (awarded with distinction)
1986 B.Sc. (Hons) Mathematics, University of the Western Cape
1983 B.Sc. Mathematics (major), Applied Mathematics (major), Mathematical Statistics, Computer Science, Physics, University of the Western Cape
1973 Matriculated from Windermere High School, Kensington

CURRENT ASSOCIATION

2023 – UNIVERSITY OF JOHANNESBURG Senior Research Associate, Dean's Office (FEBE)

As a Senior Research Associate at the University of Johannesburg, my role centers on advancing scholarly research and contributing to the academic development of postgraduate students. I am actively engaged in designing and conducting research projects, analysing data, and disseminating findings through academic publications and conferences. In addition, I provide supervision and mentorship to postgraduate students, guiding them through the research process from proposal development to final submission. This includes supporting methodological decisions, fostering critical thinking, and ensuring academic rigor, thereby contributing to both individual student success and the broader research output of the institution.

PREVIOUS EMPLOYMENT

2021 – 2022 UNIVERSITY OF CAPE TOWN Senior Scholar, Centre for Educational Assessments (CEA)

As a Senior Scholar, I played a strategic leadership role in advancing research, test development, and capacity building within the Centre for Educational Assessments (CEA). I provided academic oversight of large-scale assessment initiatives, including the National Benchmark Tests Project, ensuring the development of valid, reliable, and psychometrically sound instruments across multiple domains. As Principal Investigator of the Diagnostic Mathematics Information for Student Retention and Success (DMISRS) project, I led a nationally collaborative research programme focused on improving student success and reducing attrition in higher education, particularly in mathematics-intensive fields. My role also involved managing and mentoring academic staff, transferring scarce skills in educational measurement, and contributing to succession planning within a highly specialised unit. Through extensive stakeholder engagement, research dissemination, and collaboration with national bodies, I contributed to shaping evidence-based admissions, placement, and curriculum practices across the South African higher education sector.

2015 – 2020 UNIVERSITY OF CAPE TOWN Test Development Coordinator of the CEA

As Test Development Co-ordinator at the Centre for Educational Assessments (CEA), I led and oversaw all aspects of assessment design, development, and quality assurance, ensuring the academic integrity of tests through rigorous attention to reliability and validity. I drove ongoing test development in response to evolving institutional and national needs, while remaining current with research and developments in educational assessment and admissions testing. I provided leadership to multidisciplinary teams, managing item development, review, test assembly, and statistical analysis, and held line management responsibility for Academic Literacy, Quantitative Literacy, and Mathematics research leads, as well as the statistician and test administrator. My role included overseeing standards-setting processes, analysing and reporting test data to institutional and national stakeholders, and contributing to research and development through peer-reviewed publications, reports, and other scholarly outputs. In addition, I contributed to teaching and postgraduate supervision in assessment-related fields, built capacity in this scarce skills area through training and mentorship, and engaged with stakeholders—including higher education institutions and the media—to support the interpretation and appropriate use of test results.

2011 – 2014 UNIVERSITY OF CAPE TOWN, Deputy Director of the Academic Development Programme (ADP) seconded as Director of the Alternative Admissions Research Project (AARP), Centre for Higher Education Development (CHED)

2008 – 2010 *UNIVERSITY OF CAPE TOWN*, Deputy Director of the Academic Development Programme
 1999 – 2007 *UNIVERSITY OF CAPE TOWN*, Numeracy Centre Co-ordinator in the (ADP)
 1990 – 1998 *UNIVERSITY OF THE WESTERN CAPE*, Department of Mathematics and Applied Mathematics
 1986 – 1989 *UNIVERSITY OF CAPE TOWN*, Department of Mathematics and Applied Mathematics
 1976 – 1986 *BONWIT (PTY) LTD*, Work Study Trainee (1976); Work Study Engineer (1977 – 1978); Project Engineer (1979 – 1982) and Work Study Manager (1983 – April 1986) in the Management Services Division

AWARDS AND SCHOLARSHIPS

2018 University Capacity Development Programme (UCDP) Grant
 2016 - 2019 UCT Grant Awards
 2015 Emerging Researcher Programme Grant at UCT
 2011 Nelson Mandela Fellow at W.E.B. Du Bois Institute, Harvard University
 1994 University of Missouri – University of the Western Cape Staff Exchange
 1993 Mellon Faculty Fellowship Award
 1983 Liebenberg and Stander Award
 1983 Old Mutual Medal of Merit Award

CONTRIBUTION TO NATIONAL TEACHING AND LEARNING ENVIRONMENT

My contribution to teaching and learning, including the establishment of the Numeracy Centre at the UCT and the development of the Quantitative Literacy (QL) tests, spans nearly 40 years. I have led the quantitative literacy test which is part of the National Benchmarks Tests (NBT) Project and have been responsible for developing the framework, trial tests and pilot tests. I have also coordinated the CEA Research and Development department which has the responsibility for the NBT Project for the national higher education sector. The NBT QL tests determine the levels of quantitative literacy of individuals and cohorts and are used to assess students across SA higher education institutions and faculties in order to facilitate the quantitative literacy articulation gap between student cohorts and disciplinary demands. They are also used in the development of QL interventions for many faculties.

- I am a current board member of the Independent Examinations Board (IEB)
- I am a previous member of The Association for Mathematics Education of South Africa (AMESA)
- I am a previous member of the Higher Education Learning and Teaching Association of Southern Africa (HELTASA)
- I am a previous executive member of HELTASA
- I am a previous convenor of the Access and Admission Special Interest Group (SIG) of HELTASA
- I am a previous member of the South African Association for Institutional Research (SAAIR)
- I am a previous member of the Southern African Association for Research in Mathematics, Science and Technology Education (SAARMSTE)
- I am an external examiner and reviewer of books, conference papers and journal articles
- I contributed and commenting on the National and Institutional policy documents regarding Mathematics and Mathematical Literacy.
- I have authored and presented numerous technical reports to a range of higher education stakeholders including Universities South Africa (USAf), Department of Basic Education, Department of Higher Education and Training, Public and Private Higher Education institutions and Bursary funders.

SUPERVISION

2 PhD students (1 graduated and 1 current)

PhD Engineering Education	Current	Mathematics Pathways and Epistemic Access: First-Year Engineering Mathematics Success at a South African Comprehensive University
PhD Physiotherapy Education	2026	Development of a Clinical Readiness Diagnostic Assessment Tool for Third-year Physiotherapy Students

RESEARCH

RESEARCH INTERESTS

- Access to academic practices in higher education at undergraduate and postgraduate levels, including a specific focus on the articulation gap between school and university, and ways of mediating the misalignment between students' prior educational experiences and the demands of higher education practices.
- Educational testing in general, and in particular the assessment of Academic Literacy, Quantitative Literacy, Statistical Literacy, Mathematics and Scientific Reasoning levels of cohorts of students, to support the diagnosis of student learning difficulties, as well as the selection and placement of students into programmes, and to inform curriculum design and appropriate curricular interventions.
- Teacher and tutor training practices in relation to academic literacies (including academic, quantitative, mathematical, scientific and statistical literacy), with a focus on how educators mediate the multiple and often competing practices required to effectively teach academic literacies.
- The use of technology both as technical (psychometric and statistical) tools and as educational (blended learning) tools to enhance teaching, learning, and assessment.
- Commutative Algebra: Analogues of Number-Theory for Higher Dimensional Rings.

RESEARCH PROJECTS

The Diagnostic Mathematics Information for Student Retention and Success (DMISRS) project.

This project was funded through the University Collaborative Development Programme (UCDP) from the Department of Higher Education and Training (DHET). The project brought mathematicians from across the country together to work collectively and collaboratively in an attempt to improve the graduation and throughput of students in Science, Technology, Engineering and Mathematics (STEM) programmes by focusing on improving student performance in mathematics.

The Academic Development research Project (ADrP) - A new generation of university students: an investigation of changes and continuities.

This longitudinal mixed-methods study, based in the Academic Development Programme (ADP) at UCT, examined access and throughput of students from disadvantaged backgrounds. It focused on factors influencing the retention and graduation of students in dedicated ADPs, asking: "What facilitates or hinders the 2008 NSC students' access to and success in higher education?" Research indicates that students from marginalised communities often struggle with disciplinary discourses due to differences in knowledge, language, and culture. Rochelle Kapp and I conceptualised, fund-raised, and co-convened the project, which involved ten ADP staff members.

The National Benchmark Tests (NBT) project

In 2005, Higher Education South Africa (HESA) initiated the National Benchmark Tests Project (NBTP) to assess the academic preparedness of incoming students, becoming fully operational in 2009. The NBTP tests academic literacy, quantitative literacy, and mathematics. I lead the development of the quantitative literacy test and coordinated research and provided academic leadership within the Centre for Educational Assessments (CEA), where the project is based.

The Postgraduate Literacies (PG Lit) project

The Postgraduate Literacies project at CHED, University of Cape Town, explored ways to support postgraduate research writing, encompassing academic literacy, numeracy, and technology. I led the sub-project on academic numeracy practices.

South African Multimodality in Education (SAME): Academic Numeracy Practices (ANP) project

Research on academic literacies has often focused on writing, but quantitative information can be represented through multiple modes including writing, visuals, numbers and genres like tables, charts, and graphs. This study examined student texts in quantitative disciplines to explore multimodal academic numeracy practices.

The Collaborative Mathematics Project (CMP)

In February 2014, the Centre for Educational Assessments (CEA) at UCT hosted a one-day First Year Mathematics Forum, bringing together Mathematics academics to discuss how the NBTs could improve student learning and success. Following the forum, five institutions—Stellenbosch University, UCT, Fort Hare, the Free State, and KwaZulu-Natal—established the three-year Collaborative Mathematics Project, funded by DHET. The project aimed to identify high failure rates in first-year Mathematics, link them to NSC and NBT diagnostic

data, evaluate current curriculum support, and assess available resources. By 2016, the project provided a baseline picture of Mathematics support across the participating institutions, helping inform extended degree courses and curriculum-integrated support.

RESEARCH OUTPUT

I have published 38 peer reviewed articles (25 as journal articles and 13 as peer reviewed conference proceedings), three book chapters and one chapter pending publication, two book sections and one newspaper article. I have one journal article pending publication, four journal articles under review and three articles in process. I have presented at least 60 papers at local and international, workshops and conferences and have produced approximately 40 technical reports.

PUBLICATIONS OF A SCHOLARLY NATURE

Mathematical Literacy was introduced as a subject in South African Schools and Further Education and Training Colleges in 2006. Students have a choice between Mathematics and Mathematical Literacy as a subject in their final three years of either the National Senior Certificate or the National Senior Certificate (Vocational). I have co-authored six Mathematical Literacy student books, three for use in grades 10 to 12 of the National Senior Certificate and three for use at levels two to four of the National Senior Certificate (Vocational). I have also co-authored six Mathematical Literacy teacher and lecturer guides to accompany these student books.
